```

```
This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung airway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; antisense; bronchoconstriction; allergy; hyposecretion; pain; respiratory tract inflammation; adenosine sensitivity; lung; cancer; surfactant depletion; antiallergic; antiinflammatory; antiasthmatic; analgesic; hypotensive; immunosuppressive; cytostatic; cytoste fibrosis; besta-adrenergic agonist; respiratory disease; pulmonary vasoconstriction; respiratory distress syndrome; allergic rhinitis; pulmonary hypertension; emphysema; chronic obstructive pulmonary disease; cancer; bronchitis; pulmonary transplantation rejection; ss; primer.
with a disease or condition such as pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system e.g., lung, brain, heart, kindey, etc, tissue environment and thereby, to prevent any unwanted effects due to it
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        to

bronchodilating agent.

```
The invention also describes a kit, that comprises: (a) a delivery device, in separate containers, (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallargic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is a beta-adrenergic agonist. The composition is useful for preventing or treating a respiratory, lung or malignant disease. The administered composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to pulmonary obstruction, and/or bronchocomstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated inflammation, allergies and/or surfactant hypoproduction are associated inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                   inflammation, allergies, asthma, impedential paraconstitution, distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system

```
This invention describes a novel composition (a) a first active agent, comprising oligonucleotides, effective for alleviating bronchoconstriction, respiratory tract inflammation, allergies and reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors, surfactant depletion or hyposecretion, when administered to a mammal. The oligonucleotides are derived from a gene encoding or regulating expression of a target polypeptide associated with lung alway or lung dysfunction or cancer and can be anti-sense to the corresponding mRNA. The invention also describes a kit, that comprises: (a) a delivery device, in separate containers (b) the oligonucleotides, (c) instructions for adding a carrier and for use of the kit. The composition of the invention has antiallergic, antiinflammatory, antiasthmatic, analgesic, hypotensive, immunosuppressive and cytostatic activity, is beta-adrenergic agonist. The composition is useful for preventing or composition comprises oligo and is administered to reduce the amount of target polypeptide present in the lungs. The composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to pulmonary obstruction, and/or bronchoconstriction and/or surfactant hypoproduction are associated inflammation, allergies and/or surfactant hypoproduction are associated inflammation. Allergies and/or surfactant hypoproduction are associated inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              inflammation, allergies, asthma, impeded respiration, respiratory distress as syndrome, pain, cystic fibrosis, allergic thinitis, pulmonary hypertension, emphysema, chronic observative pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                         The invention comprises an antisense oligonucleotides that are targeted to nucleic acids encoding a mammalian glucocorticoid receptor. The antisense oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets the human glucocorticoid receptor gene. NOTE: The present sequence contains 2'-methoxyethyl (2'-MOE) wings and a phosphorothioate backbone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, obesity, cardiovascular disorder, hyperlipidemia or Cushing's syndrome.
                                                                                                                                              New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, obesity, cardiovascular disorder, hyperlipidemia or Cushing's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention comprises an antisense oligonucleotides that are targeted to nucleic acids encoding a mammalian glucocorticoid receptor. The antisense oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              antisense oligomucleotide; glucocorticoid receptor; infection; inflammation; tumour formation; diabetes; obesity; cardiovascular disorder; hyperlipidaemia; Cushing's syndrome; human; ss; phosphorothioate backbone; 2'-methoxyethyl; 2'-MOE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human glucocorticoid receptor-specific antisense oligonucleotide #1774.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a compound targeted to and which specifically hybridises with a nucleic acid molecule encoding VEGF-C, and inhibits the expression of VEGF-C. The compound, composition and methods are useful for treating a disease or condition associated with VEGF-C, such as a cardiovascular disorder e.g. atherosclerosis or diabetic retinopathy or an autoimmune or inflammatory disorder. They are also useful in research and diagnostics for modulating the expression of VEGF-C. The present sequence represents a human VEGF-C antisense oligonucleotide.
cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets the human glucocorticoid receptor gene. NOTE: The present sequence contains 2'-methoxyethyl (2'-MOE) wings and a phosphorothioate backbone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New compounds, particularly antisense oligonucleotides targeted to a nucleic acid encoding vascular endothelial growth factor-C (VEGF-C), useful for treating atherosclerosis, diabetic retinopathy, or inflammatory disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        human; ss; VEGF-C; cardiovascular disorder; atherosclerosis; diabetic retinopathy; autoimmune disorder; inflammatory disorder; vascular endothelial growth factor; antisense.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ;

                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a compound targeted to and which specifically hybridises with a nucleic acid molecule encoding VEGF-C, and inhibits the expression of VEGF-C. The compound, composition and methods are useful for treating a disease or condition associated with VEGF-C, such as a cardiovascular disorder e.g. atherosclerosis or diabetic retinopathy or an autoimmune or inflammatory disorder. They are also useful in research and diagnostics for modulating the expression of VEGF-C. The present sequence represents a human VEGF-C target region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 phosphorochioate; 2' MOE; breast cancer; dyslipidaemia; atherosclerosis; low HDL; high density lipoprotein; high LDL; hypercholesterolaemia; gall stone; triglyceridaemia; obesity; hepatitis; hepatocellular carcinoma; aromatase; cytostatic; antilipaemic;

This invention relates to novel antisense compounds useful for modulating the expression of liver related homologue-1 (LRH1) and splice variants the expression of liver refers to compositions 8-30 nucleobases in length that target a portion of an active site on the nucleic acid molecule encoding LRH1 (also known as NESA2). LRH1 is a monomeric orphan molecule encoding LRH1 (also known as NESA2). LRH1 is a monomeric orphan conclear receptor protein that functions as a tissue specific ranscription factor. The present invention describes antisense oligonucleotides that comprise at least one modified internucleoside oligonucleotides that comprise at least one modified internucleoside linkage, a phosphorothioate linkage; at least one modified sugar moiety, a 2-0-methoxysthyl (2' MOE) and at least one modified sugar moiety. The artisense compounds are useful for treating or disgnosing a disease associated with LRH1, such as breast cancer, disgnosing a theroscalerosis, low HDL (high density lipoprotein), hyperholesterolaemia, gall stones cripil (low density lipoprotein), hyperholesterolaemia, gall stones cripinal as hepatocellular carcinoma or a condition associated with aromatase activity. Accordingly, these compositions exhibit cytostatic, antilipaemic, antiarteriscleotic, anorectic, hepaticic, antilipaemic, antiarteriscleotic, anorectic, hepaticic, all activities. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antisense oligonucleotides targeted to a nucleic acid encoding liver related homologue-1 (LRH1), useful for treating breast cancer, dyslipidemia, atherosclerosis, hypercholesterolemia, or hepatitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /mod_base= OTHER /nethoxyethyl (2' MOE) nucleotides. All cytidine nucleobases are 5-methylcytidine."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note= "OTHER= 2' methoxyethyl (2' MOE) nucleotides. All cytidine nucleobases are 5-methylcytidine."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      oligonuclectide sequence is an antisense DNA oligo used to modulate the expression of the human LRH1 protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to novel antisense compounds useful for modulating the expression of liver related homologue-1 (LRH1) and splice variants thereof. Specifically, it refers to compositions 8-30 nucleobases in length that target a portion of an active site on the nucleic acid molecule encoding LRH1 (also known as NRSA2). LRH1 is a monomeric orphan nuclear receptor protein that functions as a tissue specific transcription factor. The present invention describes antisense oligonucleotides that comprise at least one modified internucleoside linkage, a phosphorothicate linkage; at least one modified internucleoside as 2'-0-methoxyethyl (2' MOE) and at least one modified nucleobase, a 2'-0-methoxyethyl (2' MOE) and at least one widtified nucleobase, a 5-diagnosing a disease associated with LRH1, such as breast cancer, dyslipidaemia, atherosclerosis, low HDL (high density lipoprotein), high LDL (low density lipoprotein), hypercholesterolaemia, gall stones,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New antisense oligonucleotides targeted to a nucleic acid encoding liver related homologue-1 (LRH1), useful for treating breast cancer, dyslipidemia, atherosclerosis, hypercholesterolemia, or hepatitis.
                                                                                                                                                         phosphorothicate, 2 MOE, breast cancer, dyslipidaemia, atherosclerosis, low HDL, high density lipoprotein, high LDL, hypercholesterolaemia, gall stone, triglyceridaemia, obesity, hepatitis;
                                                                                                                                                                                                                                                                                                                                                                                /note= "OTHER= 2' methoxyethyl (2' MOE) nucleotides. triglyceridaemia, obesity, hepatitis B virus-mediated acute or chronic hepatitis, as well as hepatocellular carcinoma or a condition associated with aromatase activity. Accordingly, these compositions exhibit cytostatic, antilipaemic, antiarteriosclerotic, anorectic, hepatotropic, litholytic, antiliflammatory and virucidal activities. This oligonucleotide sequence is an antisense DNA oligo used to modulate the expression of the human LRHI protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /note= "This oligonuclectide has a phosphorothioate backbone and 2-'methyoxyethyl (2'-MOE) wings at the 5' and 3' ends, which are 4 nucleotides in length. The antisense oligonucleotides are useful for modulating the expression of endothelial lipase in cells or tissues to tract diseases associated with EL expression, such as dyslipidaemia, low high density lipoprotein (HDL), cardiovascular disorder or metabolic syndrome X. In addition, the oligonucleotides are
                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human endothelial lipase antisense oligonucleotide, SEQ ID 1535.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New antisense oligonucleotide for modulating endothelial lipase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to antisense oligonucleotides (ADJ21603-ADJ25510) targeted to human Endothelial Lipase (EL) coding sequence (ADJ25517), where the antisense oligonucleotide specifically hybridises with and inhibits the expression of EL. The antisense oligonucleotides are useful for modulating the expression of endothelial lipase in cells or tissues to treat diseases associated with EL expression, such as dyslipidaemia, low high density lipoprotein (HDL), cardiovascular disorder or metabolic syndrome X. In addition, the oligonucleotides are used for diagnostics, prophylaxis, or as research reagents or kits.

The compound and composition are useful for treating a disease or condition associated with Navi.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate but not limited to neonatal or infantile epilepsy, or atexia. The present sequence represents a chimeric phosphorothioate oligonucleotide with 2. MOE wings and a deoxy gap. Used during the antisense inhibition of human Navi.3 expression, the oligonucleotides are designed to target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New antisense compound targeted to a nucleic acid molecule encoding Nav1.3, useful for useful for treating a disease or condition associated with Nav1.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Navl.3; Analgesic; Nootropic; Neuroprotective; post-herpetic neuralgia;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to an antisense compound targeted to a suucleic acid molecule encoding Nav1.3, where the antisense compound specifically hybridizes with and inhibits the expression of Nav1.3. The compound and composition are useful for treating a disease or condition neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigenman neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate but not limited to neonatal or infantile epilepsy, or ataxia. The presente a chimeric phosphorothioate oligonucleotide with human Nav1.3 expression, the oligonucleotide with human Nav1.3 expression, the oligonucleotides are designed to target
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .;

Also described are: a composition; inhibiting the expression of ESM-1 in cells or tissues; and treation; inhibiting the expression of ESM-1 in cells or tissues; and the compound is useful for preparing a composition for treating diabetes, cancer, ischaemia or reperfusion injury, or angiogenic, immunological, cardiovascular or neurological disorder. This sequence represents an antisense oligonuclectie that can be used to modulate expression of endothelial specific molecule-1 (ESM-1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New antisense compound, having a sequence targeted to a nucleic acid encoding endothelial specific molecule-1 (ESM-1), useful for preparing a composition for treating e.g., diabetes, cancer or cardiovascular

```
The invention describes a new antisense compound, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding endothelial specific molecule-1 (ESM-1), that specifically hybridises with the nucleic acid ESM-1 and inhibits its expression. Also described are: a composition; inhibiting the expression of ESM-1 in cells or tissues; and treating an enimal having a disease or condition associated with ESM-1. The compound is useful for preparing a composition for treating diabetes, cancer, ischaemia or reperfusion injury, or angiogenic, immunological, cardiovascular or neurological diabetes, antisense oligonucleotide that can be used to modulate expression of endothelial specific molecule-1 (ESM-1).

Also described are: a composition; inhibiting the expression of ESM-1 in cells or tissues; and treating an animal having a disease or condition associated with ESM-1. The compound is useful for preparing a composition for treating diabetee cancer, ischaemia or reperfusion injury, or angiogenic, immunological, candiovascular or neurological disorder. This sequence represents an antisense oligonucleotide that can be used to modulate expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes a new antisense compound, having a sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes a new antisense compound, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding endothelial specific molecule-1 (ESM-1), that specifically hybridises with the nucleic acid ESM-1 and inhibits its expression. Also described are: a composition; inhibiting the expression of ESM-1 in cells or tissues; and treating an animal having a disease or condition associated with ESM-1. The compound is useful for preparing a composition for treating diabetes, cancer, ischaemia or reperfusion injury, or anglogenic, immunological, cardiovascular or neurological disorder. This sequence represents an antisense oligonucleotide that can be used to modulate expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antisense compound, having a sequence targeted to a nucleic acid encoding endothelial specific molecule-1 (ESM-1), useful for preparing a composition for treating e.g., diabetes, cancer or cardiovascular

The invention relates to the use of at least one osmolyte to heat stabilize at least one enzyme that is used in an in-vitro bioluminometric assay during the enzymatic reaction. The osmolyte is useful to heat stabilize at least one enzyme that is used in an in-vitro bioluminometric assay during the enzymatic reaction. The use of osmolytes are increases the speed and quality of DNA sequencing using pyrosequencing (RTM) technology. This sequence represents the resultant DNA sequence obtained using the method of the invention for Pyrosequencing (RTM).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Use of at least one osmolyte to heat stabilize at least one enzyme, e.g. luciferase or apyrase, which is used in an in-vitro bioluminometric assay during the enzymatic reaction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Farnesoid X receptor gene expression antisense inhibitory oligo #877.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
                                                                                                                                                                                                                                                                                                                                                         The invention relates to an antisense compound 8-30 nucleobases in length targeted to a nucleic acid molecule encoding Farnesoid X receptor (FXR), where the antisense compound specifically hybridizes with and inhibits the expression of FXR. The composition and methods are useful for inhibiting the expression of FXR (Farnesoid X receptor) in cells or tissues, or for treating diseases or conditions associated with FXR, such as diabetes, immunological disorders, canditions associated with FXR, such dyslipidemia and its symptoms, atherosclerosis, low HDL (high density lipoprotein) or hypercholesterolemia, gallstones, hypertriglyceridemia, obesity, hencological disorders, or ischemia/reperfusion injury. In addition, the composition is used for diagnostics, prophylaxis, or as research reagents or with.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to an antisense compound 8-30 nucleobases in length targeted to a nucleic acid molecule encoding Farnesoid X receptor (FXR), where the antisense compound specifically hybridizes with and inhibits the expression of FXR. The composition and methods are useful for inhibiting the expression of FXR (Parnesoid X receptor) in cells or tissues, or for treating diseases or conditions associated with FXR, such as diabetes, immunological disorders, cardiovascular disorders, e.g. dyslipidemia and its symptoms, atheroscierois, low HDL (high density lipoprotein), elevated LDL (low density lipoprotein) or hypercholesterolemia, gallstones, hypertriglyceridemia, obesity, neurological disorders, or ischemia/reperfusion injury. In addition, the composition is used for diagnostics, prophylaxis, or as research reagents or kits. This sequence corresponds to an antisense oligonucleotide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New antisense oligonucleotides useful for modulating expression of Farnesoid X Receptor (FXR) or for treating diseases associated with FXR, e.g. diabetes, immunological disorders, cardiovascular disorders, gallstones or obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /mod_base= OTHER

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                The invention describes a compound targeted to a nucleic acid molecule encoding endothelial differentiation gene 2. The compound, 8-80 nucleobases in length, is targeted to a nucleic acid molecule encoding cand chelial differentiation gene 2, where the compound specifically complete with the nucleic acid molecule encoding the endothelial differentiation gene 2 comprising a sequence of 1576 bp (SEQ ID NO: 4) differentiation gene 2 compound a sequence of 1576 bp (SEQ ID NO: 4) described are: a method of inhibiting the expression of the endothelial differentiation gene 2; a diagnostic method for indentifying a disease state; a kit or assay device comprising the compound; and treating an animal having a disease or condition associated with endothelial differentiation gene 2 compound so that expression of endothelial differentiation gene 2 compound so that expression of methods are useful in treating an animal having a disease or condition, comethods are useful in treating an animal having a disease or condition, i.e. hyperproliferative disorder. This sequence represents a human condition dend the liet methods are useful in treating an animal having a disease or condition, i.e. hyperproliferative disorder. This sequence represents a human condition gene 2 antisense oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       coding mononucleotide repeat; cMNR; antibody; MSI-H tumour;

The present invention describes genes containing coding mononucleotide repeats (cMNRs). The genes are useful for the development of an antibody gainst MSI-H (hugh microsatallite instability) tumour. Also described: (1) cDNA genes containing cMNRs with 10 or more nucleotide sequences, and selected from the cDNA genes having the nucleotide sequences of SEQ ID selected from the cDNA genes having the nucleotide sequences of SEQ ID 37, 39, 41 and 43; (2) cDNA genes, which are frameshift mutated by clettion or insertion of one or more base in the cMNRs; (3) genomic DNA deletion or insertion of one or more base in the cMNRs; (3) genomic DNA clettion for more nucleotide sequences of SEQ ID consists of the genomic DNA genes having the nucleotide sequences of SEQ ID consists, 4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42 and 44; and (4) genomic DNA genes, which are frameshift to mutated by deletion or insertion of one or more base in the cMNRs. The genes have cytostatic activity. The present sequence represents a PCR primer which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, SCAIP, CAPN3, DYSF, calpain; calcium-activated neutral protease,

                                                                                                                                                                                                                                                                                                                                                                à
                                                                                                                                                                                                                                                           The present invention relates to a Single Condition Amplification/
Internal Primer (SCAIP) sequencing method for direct sequence analysis of
Internal Primer (SCAIP) sequencing method for direct sequence analysis of
In multi-exon genes from genomic DNA samples and identifying mutations
in multi-exon genes e.g. the dystrophin gene, CAPN3 gene and DYSF gene.
Whatations in the dystrophin gene reault in both Duchenne Muscular
Dystrophy (DMD) and Becker Muscular Dystrophy (BMD). Mutations in the
CAPN3 gene, encoding calpain (calcium-activated neutral protease) result
in limb-girdle muscular dystrophy type 2A (LGMDZA) and mutations in the
DYSF gene, encoding dysferlin, result in limb-girdle muscular dystrophy
CC type 2B (LGMDZB). The method comprises bringing into contact in each of
the reaction chambers an amplicon from a different one of the
amplification reactions and one or more internal sequencing primers
CC amplification reactions and one or more internal sequencing primers
CC corresponding to the amplicon and analysing the sequences of the
amplification and analysis for the rapid, accurate, and economical
canalysis of any large multi-exon gene. It is also useful for the
genetic mutations in any large multi-exon gene. It is also useful for the
indentification and analysis of specific individual genomic mutations,
cincluding deletions, point mutations, or its combinations, gene complexes
with multiple exons/introns spanning large genomic regions. The present
cc sequence is a PCR primer, used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                              genetic

    PCR primer for constant reion of anti-Fas antibody heavy chain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to two isolated cDNA molecules ((pASC6) and (pACOS7)) encoding 1-aminocyclopropane-1-carboxylic acid synchase (ACS) and an ethylene forming enzyme (EFE), respectively. The clones are deposited under the Accession Numbers NCIMB 40813 and NCIMB 40814, respectively. pASC6 and pACOS7 may be used to genetically control processes involved in fruit ripening (and other ethylene related processes involved in fruit ripening (and other ethylene related processes). Vectors comprising the cDNA sequences may be used to produce transgenic bananas with altered fruit ripening characteristics. The orientation of the pASC6 and pACOS7 used in the construct, will determine how the ripening process is affected. If the genes have a sense
                                                                                                  PCR primers AAV37276-77 are used to amplify the constant region of the heavy chain of human immunoglobulin G (IgG). The PCR product is used to create an anti-Fas antibody. The anti-Fas antibody can be used for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1-aminocyclopropane-1-carboxylic acid synthase; ACS; EFB; banana; ethylene forming enzyme; ethylene biosynthesis; plant; fruit ripening; transgenic; enzyme; inhibition; flavour; texture; PCR primer; ss.
DNA encoding, e.g. variable region of anti-Fas antibody - useful for, e.g. diagnosis and treatment of auto-immune diseases.

AAZ65654 to AAZ69578 represent human biallelic markers from the present invention, which contain a polymorphic base at position 24 of their mucleotide sequences. AAZ6579 to AAZ7440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the disconses to and side effects from
                                                                                                                                                                                                                                                                                                                                          ö
orientation, and transcribe mRNA that encodes an active enzyme, the rate of ripening will be increased (up-regulation) (however, full-length sense constructs can also be used to inhibit enzyme expression by constructs can also be used to inhibit enzyme expression by constructs of genes encode antisense mRNA, they will inhibit the process down (down-regulation). In this manner different spatial and temporal patterns of genes expression can be produced. Retardation of the zete of ripening will reduce the rate of deterioration of banana fruit after harvest. This helps in production of high quality fruit that has improved flavour and texture. Sequences AAX27517-531 represent primers based on sequences conserved between 6 species, for PCR amplification of EFE gene fragments from bananas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      construct a high density disequilibrium

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to the use of a polypeptide (ABB44544-ABB44601, ABB44664-ABB44623) or its variant or encoding nucleic acid (ABA81990-ABA81995, ABA82016-ABA82032) with vulnerary and/or dermacrological activity for the diagnosis, prevention and treatment of skin disorders and treatment in wound healing or for the identification of pharmacologically active substances. The nucleic acids are useful in gene therapy. The present sequence is that of a PCR primer, useful to the invention. Note: The printed sequence listing for this specification was incomplete, terminating part way through SEQ ID NO 106. The remaining data was obtained from EPO data for an equivalent patent (EP1114862)

                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to the use of a polypeptide (ABB44544-ABB44601, ABB44606-ABB44603) or its variant or encoding nucleic acid (ABA81990-ABA81995). ABA819195 ABA820132) with vulnerary and/or dermacrological activity for the diagnosis, prevention and treatment of skin disorders and treatment in wound healing or for the identification of pharmacologically active substances. The nucleic acids are useful in gene therapy. The present sequence is that of a PCR primer, useful to the invention. Note: The printed sequence listing for this specification was incomplete, terminating part way through SEQ ID NO 106. The remaining data was obtained from EPO data for an equivalent patent (EPI114862)
                                                                                                                                 Human; mouse; vulnerary; dermatological; skin disorder; wound healing; gene therapy; PCR primer; 88.

The sequence represents PCR primer #4 from avocado used to design a degenerate PCR primer, BEFE-5 (AAS09924) which was used to clone ethylene for forming enzyme (EFE) from banana, used in the method of the invention.

The method involves modifying the level of ethylene biosynthesis in a plant of the genus Musa by inserting into the genome of the plant a DNA sequence (I) encoding a banana 1-aminocyclopropane-1- carboxylic acid synthase (ACS) or an ethylene-forming enzyme (EFE), where (I) is in sense or antiense configuration, and modifies the level of activity of ACS or EFE. This retards the rate of ripening in banana fruits which reduces the care of deterioration of banana fruit after harvest. As a result, fruit may be harvested when they have reached partial or full ripeness and still have the robustness to withstand handling and transport to reach the consumer in good condition. In this way high quality ripe fruit can be made available to the consumer with reduced requirement for post.

Charvest treatment. High quality fruit will have improved flavour and texture. High quality fruit can be produced consistently over a wide the consumer the consumer with results and periods and such fruit can be held in store for long periods and consistents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Modifying level of ethylene biosynthesis in plant of genus Musa, involves inserting into genome of plant a DNA sequence encoding banana 1-aminocyclopropane-1-carboxylic acid synthase or ethylene-forming enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
1-aminocyclopropane-1-carboxylic acid synthase; ACS; banana;
ethylene biosynthesis; ethylene-forming enzyme; BFB; fruit ripening;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Single nucleotide polymorphism, SNP, human, cancer, inflammation, heart disease, paternity testing, forensic science, ds.

                                                                                                                                                                                                                                                                                                                                                                                                                 DNA sequences AAH62100 - AAH62688 represent segments of human genes which contain single nucleotide polymorphisms (SNPs). A method is included in the invention for analysing a nucleic acid sample, which consists of determining the base occupying any one of the polymorphic sites of disgnosis or monitoring of diseases, such as cancer, inflammation, heart diseases, diseases of the cardiovascular system, and infection by microorganisms. The oligonucleotides are also useful in the manufacture of a medicament for the treatment or prophylaxis of the diseases, and as a pharmaceutical. SNP containing oligonucleotides are useful in an east of a pharmaceutical supplications such as phenotype correlation, forensics, paternity testing,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Endothelin, EDN; endothelin converting enzyme; ECE; endothelin receptor; EDNR; signaling system; cardiovascular disease; coronary heart disease; hypertension; atherosolerosis; angiogenesis; fatty acid metabolism; diabetes; familial hypercholesterolaemia; forensic marker; transgenic animal; solid support; cardiovascular regulator; SNP; single nucleotide polymorphism; PCR; primer; ss.
                                                                                                                                                                                                                                                                                                                  New nucleic acid segments of the human genome, particularly from genes including polymorphic sites, for phenotype correlation, forensics, paternity testing, medicine and genetic analysis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Revised record issued on 09-SEP-2004 : Correction to Feature Table Key

The invention describes a polynucleotide (I) of the endothelin (EDNR) (EDNR) / Endothelin converting enzyme (ECE) / receptors of EDN and ECE (EDNR) (EDN) / endothelin converting enzyme (ECE) / receptors of EDN and ECE (I), signaling system which is associated with a cardiovascular disease. (I) the gene encoding EDN, ECE or EDNR (II) or a vector (III) expressing a molecular variant gene comprising (I) is useful for identifying and conclusion as pro-drug or drug capable of modularing the activity of a molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system or its gene product. Or for identifying and obtaining an inhibitor of the cortivity of a molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system or its gene product. The isolated proteins and conjunctedides encoding them are useful for preparation of a polymorleotides encoding them are useful for preparation of a polymorleotides encoding them are useful for preparation of a polymorleotides encoding them are useful as corensis, or related to comportant angiogenesis or fatty acid metabolism e.g. diabetes and familial compormal angiogenesis or fatty acid metabolism e.g. diabetes and familial compormal angiogenesis or fatty acid metabolism e.g. diabetes and comported transgenic animal and in creation of a solid support creating a transgenic animal and in creation of a solid support creating a transgenic animal and in creation of a solid support creating a transgenic animal and in creation of a solid support creating a transgenic animal and in creation of a solid support creating the invention. This sequence represents a PCR primer used to identify single nucleotide polymorphisms in DNA encoding cardiovascular regulator proteins of the EDN/ECE/EDNR signaling pathway sequence represents a polymorphisms in DNA encoding corensing polymorphisms of the EDN/ECE/EDNR signaling pathway sequence represents a polymorphisms in DNA encoding corensing polymorphisms of the EDN/ECE/EDNR signaling pathway and the EDN/ECE/EDNR signaling pathway and th

The present sequence is a PCR primer for murine alpha 1-antichymotrypsin (ACT) CDNA (see ABV7614). It was used, with the primer given in ABV76148, in examples from the invention describing the PCR amplification of murine ACT to examine expression in normally healing, well healing and different types of poorly healing wounds with different pathogenic backgrounds, and to examine the kinetics of ACT expression during wound healing in healing and diabetic mice. The invention is based on the discovery that decreased expression of ACT is causally involved in poor wound healing, specifically in poorly healing diabetes-associated and poorly healing arterial wounds. An ACT polypeptide, including murine ACT, a nucleic acid encoding it, or a cell expressing the ACT polypeptide or nucleic acid encoding it, can be used for the diagnosis, treatment and/or prevention of diabetes-associated and/or arterial wounds which heal
                                                                                                                                                                                                                                                                                                                                                                                                               Use of alpha 1-antichymotrypsin polypeptide or nucleic acids encoding the polypeptide, or of a cell expressing the polypeptide, or of antibody against the polypeptide, for diagnosing, treating or preventing poorly-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention describes a polynucleotide (I) of the endothelin (EDN)/endothelin converting enzyme (ECE)/receptors of EDN and ECE (EDNR) adjanaling system which is associated with a cardiovascular disease. (I), the gene encoding EDN, ECE or EDNR (II) or a vector (III) expressing (I) the gene encoding EDN, ECE or EDNR (II) or a vector (III) expressing (I) or a vector (III), the EDN, ECE or EDNR polypeptide of expressing a molecular variant gene comprising (I) is useful for identifying and constening a pro-drug or drug capable of modulating the activity of a molecular variant of a polypeptide of the EDN/EDNR/ECE signaling system or its gene product. The isolated proteins and cor its gene product. The isolated proteins and polynucleotides encoding them are useful for preparation of a plarmaceutical composition for treating a cardiovascular disease such as coronary heart disease, hypertension, atherosolarosis, or related to abnormal anglogenesis or fatty acid metabolism e.g. diabetes and familial hypercholesterolaemia. The gene or a polynucleotide fragment of the EDN/EDNR for composition or tatty acid metabolism e.g. diabetes and familial hypercholesterolaemia. The gene or a polynucleotide fragment of the EDN/EDNR signaling system are useful as forensic markers, for creating a transgenic animal and in creation of a solid support composition plantide in DNA ancoding a PCR primer used to identify a since the invention. This sequence represents a PCR primer used to identify a planting the polymerholestide polymerholest
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Measuring DNA-dependent DNA polymerization in a biological sample, useful for drug susceptibility testing, comprises measuring the amount of incorporated modified deoxynucleoside triphosphate with the aid of a
                                                                                                                                              The present sequence is that of a 5' primer, which was used with the 3' primer given in ACC58763 for the PCR amplification of the pro-alphal(III) chain. The PCR product was used to prepare a DNA molecule (see ACC58766) encoding a modified pro-alpha chain (see ABR4261) in which decorin replaced the globular domain of the N-propeptide of the pro-alphal(III) chain. This is an example of modified pro-alpha chains of the invention that may form part of a procollagen molecule for incorporation into
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to measuring DNA-dependent DNA polymerization in a biological sample and involves measuring the amount of incorporated modified deoxymucleoside triphosphate with the aid of the label of a bound antibody. The method is useful in measuring DNA polymerization for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DNA polymerization; drug susceptibility; HIV; reverse transcriptase; RT;
                                                                         Novel modified pro-alpha-chain useful for treating wounds and fibrotic disorders, has triple helical forming domain linked to N-terminal domain that contains a polypeptide sequence from proteoglycan protein core.

The present invention relates to a method (M1) for selecting an animal for the presence of a nucleic acid comprises testing the animal for the presence of a nucleic acid comprises testing the animal for the presence of a nucleic acid comprises testing the activity of an evolutionary conserved CpG island located in intron 3 of an IGP2 gene; and/or binding of a nuclear factor to an IGP2 gene. The nuclear factor is capable of binding to a stretch of nucleotides which in the wild type pig, mouse or human IGP2 gene is part of an evolutionary conserved CpG island, located in intron 3 of the IGP2 gene. The stretch is functionally equivalent to (ADQ80709). The nucleic acid modification in ADQ80709 comprises a G to A transition of the nucleic acid modification in ADQ80709 comprises a G to A transition CC The nucleic acid modification in ADQ80709 comprises a G to A transition of an IGP2 intron3-n13072. (M1) is useful for selecting an animal with corporaties related to muscle mass, fat deposition, and/or teat number. The properties related to muscle mass, fat deposition, and/or teat number. The construction of an IGP2 gene and ocated in intron 3 of an IGP2 gene and/or modulating binding of a nuclear factor to an IGP2 gene and/or modulating binding of a nuclear factor to an IGP2 gene and a method (M4) for identifying a compound capable of modulating binding of a nuclear factor to an IGP2 gene in a cell or organism. C modulating mRNA transcription of an IGP2 gene in a cell or organism.
                                                                                                                                                                                                                                                                                                                                   ..

ö
(M3) and (M4) are useful for identifying compounds capable of modulating mRNA transcription of an IGF2 gene and/or modulating binding of a nuclear factor to an IGF2 gene. Compounds identified are potentially useful for treating obsaity, muscle deficiencies and diabetes. The present sequence is a primer which was used to produce porcine sequence tagged sites (STS) in an example from the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; 88; antisense therapy; cytostatic; antiinflammatory; haemostatic; cerebroprotective; notropic; neuroprotective; antiparkinsonian; muscular; CD20; neurite growth inhibitor gene; NOG0; hammerhead ribozyme; DNAzyme; inozyme; G-cleaver; amberzyme; zinzyme; lymphoma; leukaemia; B-cell lymphoma; non-Hodgkin's lymphoma; NHL; lymphocytic leukaemia; MCL; immunodeficiency virus; HIV associated NHL; mantle-cell lymphoma; MCL; immunocytoma; IMC; immune thrombocytopsenia; stroke; dementia; inflammatory arthropathy; central nervous system injury; cerebrovascular accident; CVA; Alzheimer's disease; multiple sclerosis; chemotherapy:induced neuropathy; amyotrophic lateral sclerosis; ALS; Parkinson's disease; ataxia; Huntington's disease; Creutzfeldt-Jakob disease; muscular dystrophy; neurodegenerative disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a nucleic acid molecule which down regulates expression of a CD20 gene and a nucleic acid molecule which down regulates expression of a neurite growth inhibitor gene (NOGO). The
                                                                                                                                                                                                       Gaps

CC nucleic acids may be enzymatic nucleic acids (e.g. a ribozyme or a DNAzyme) an Inozyme (an endolytic nucleic acid cleaving a an RNA molecule possessing an NCH mocif), a G-cleaver (cleaving RNA with an NGN triplet), a zinzyme (cleaving RNA with a YGY motif). The CD20-targetting nucleic acid is used to cleave RNA of CC of CD20 in the presence of a divalent cation that is preferably MG<sup>2</sup>+.

CC FUTCHORNOWING THE CD20-targetting nucleic acid with the level of CD20. The treatment may further comptise the use of one or more conformed in particular, the CD20 targetting nucleic acid may be used to treat lymphoma, leukaemia, B-cell lymphoma, low-grade or follicular nonconformed in a particular, because of follicular nonconformed in a particular, which is lymphocytic lymphoma, low-grade or follicular nonconformed in a limin immunodeficiency virus) associated NHL, mantle-cell lymphoma (MCL), immunocytopaenia, modifiammatory arthropathy. The NGGO-ct targetting nucleic acid is used to cleavably MG<sup>2</sup>+. Furthermore, the nucleic acid may be contacted with a cell to reduce NGGO activity of the presence of a divalent cation that is preferably MG<sup>2</sup>+. Furthermore, the coll and treat a particular, the NGGO-targetting nucleic acid may be used to therapies. In particular, the NGGO-targetting nucleic acid may further comprise the use of one or more thear central nervous system (CNS) injury and cerebrooascular a central nervous system (CNS) injury and cerebrooascular acident (CNA, stroke), Altheimer's disease, dementia, multiple sclerosis (ANS), chemotherapy-induced neuropathy, amyotrophic lateral sclerosis (ANS), chemotherapy-induced neuropathy, amyotrophic lateral sclerosis (ANS), parkins or sacuscular dystrophy, and/or other neurodegenerative disease, stacks which respond to the modulation of NGGO expression. The present construction of the invention of the nord neuropathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; 88; antisense therapy; cytostatic; antiinflammatory; haemostatic; cerebroprotective; anotropic; neuroprotective; antiparkinsonian; muscular; CD20; neurice growth inhibitor gene; NOG0; hammerhead ribozyme; DNAzyme; inozyme; G-cleaver; amberzyme; ainzyme; I-puphoma; I-p

The invention relates to a nucleic acid molecule which down expression of a CD20 gene and a nucleic acid molecule which down expression of a neurite growth inhibitor gene (NGO). The regulates expression of a neurite growth inhibitor gene (NGO). The mucleic acids may be enzymatic nucleic acids (e.g. a ribozyme or a nucleic acids and NR motif) proposessing an INCH motif), a G-cleaver (cleaving RNA with a NRN motif) proposessing an NCH motif), a G-cleaver (cleaving RNA with a NRN motif) and motification and cleaving RNA with a NRN motif) and amberzyme (cleaving RNA with a NRN motif) and contacted with a call to reduce CD20 acid is used to cleave RNA with a YGY motif). The CD20-targetting nucleic acid is used to cleave RNA cof CD20 in the presence of a divalent cation that is preferably MG<sup>2</sup> +. CC Treat in particular, the CD20 targetting nucleic acid may be used to treat in particular, the CD20 targetting nucleic acid may be used to treat in particular, B-call lymphoma, low-grade or follicular ND1. Immunocytoma (NRL), bulky low-grade or follicular ND20 targetting nucleic acid may be used to cleave RNA of the NOGO gene in the treatment and inflammatory arthropathy. The NOGO gene in the treatment and further comprise the use of one or more coll may be contacted with a cell to reduce NOGO gene in the creatment may further comprise the use of one or more coll may be contacted with a cell to reduce NOGO gene in the creat a patient having a condition associated with the level of NOGO. The treatment may further comprise the use of one or more coll may be contacted with a cell to reduce NOGO gene in the creat central nervous system (CNS) injury and creaborovascular accident creatment may further comprise the use of one or more create central nervous system (CNS) injury and creaborovascular accident creatment and sisease, ataxia, Huntington's disease, created neuropathy, amyotrophic lateral accentral pervous system (NNS) indured some construction of sisease, muscular dystrophy and coherapy-induced neuropathy, amyotrophic s

Nucleic acid molecules, e.g., enzymatic nucleic acids and antisense constructs, which down regulate expression of a CD20 gene or neurite growth inhibitor gene useful for treating, e.g., lymphoma, leukemia, and central nervous system injury. 

Claim 88; Page 81; 200pp; English.

sequence is an inozyme of the invention

The present invention relates to murine oligonucleotides (ACC62754-ACC68806), which are associated with tumour suppression, tumour reversion, apoptosis and virus resistance. The oligonucleotides are useful as (1) as probes and primers for detecting, identifying, quantifying and/or amplifying nucleic acid, e.g. as one component of a gene chip, in virco as (anti) sense reagents; and (2) for production of recombinant polypeptides. The oligonucleotides are useful for preparation of pharmaceuticals for prevention and/or treatment of viral diseases that are characterised by development of tumours or cell degeneration, specifically cancer but also Alzheimer's disease and schizophrenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated nucleic acid, useful for treating viral diseases associated with tumors and cell degeneration, also related polypeptides, antibodies and transfected cells.
                                                                                                                                                       Cytostatic; virucide; neuroprotective; nootropic; neuroleptic; murine; tumour suppressabion; tumour reversion; apoptosis; virus resistance; viral disease; tumour; cell degeneration; cancer; Alzheimer's disease; schizophrenia; se.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ACC68806), which are associated with tumour suppression, tumour teveration, apoptocasts and virus resistence. The oligonucleotides are useful as (1) as probes and primers for detecting, identifying, quantifying and/or amplifying nucleic acid, e.g. as one component of a gene chip, in virto as (anti) sense reagents; and (2) for production of recombinant polypeptides. The oligonucleotides are useful for preparation of pharmaceuticals for prevention and/or treatment of viral diseases that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated nucleic acid, useful for treating viral diseases associated with tumors and cell degeneration, also related polypeptides, antibodies and transfected cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cytostatic; virucide; neuroprotective; nootropic; neuroleptic; murine; tumour suppression; tumour reversion; apoptosis; virus resistance; viral disease; tumour; cell degeneration; cancer; Alzheimer's disease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ઠે
                                                                                                                                                                                                                                                                    The invention relates to the isolation of 6327 mucleotide sequences, fragments of at least 15 consecutive mucleotides of these nucleotides, a sequence having at least 80% identity, after optimal alignment, with the concertion of the nucleotides, or the complement, or corresponding RNA, of the nucleotides. The nucleotides are used as probes or primers for detecting, dentifying, quantifying and/or amplifying nucleic acids, as in vitro sense and antisense sequences, of nucleotides involved in tumour suppression or reversion, apoptosis and or viral resistance, to produce recombinant polypoptides, and to prepare transgenic animals, as experimental models. The nucleotides (also vectors containing them and cells containing the vectors), the encoded polypoptides and antibodies (b) against the polypoptide are useful for prevention and/or treatment of viral infections or diseases characterized by development of tumours or cell degeneration (e.g. Alzheimer's disease or schizophrenia).

Challysis of the expression of the nucleotides can be used for diagnosis and or prevention and containing the containing the vectors or all degeneration (e.g. Alzheimer's disease or schizophrenia).

The invention relates to the isolation of 6327 nucleotide sequences, cragments of at least 15 consecutive nucleotides of these nucleotides, a sequence having at least 80% identity, after optimal alignment, with the sequence having at least 80% identity, atter optimal alignment, with the uncleotides or sequence that hybridizes under stringent conditions with the nucleotides or the complement, or corresponding RNA, of the cursion or the nucleotides are used as probes or primers for detecting, identifying, quantifying and/or amplifying nucleotides as in vitro sense and antisense sequences, of nucleotides involved in tumour suppression or reversion, apoptosis and or viral resistance, to produce complemental models. The nucleotides (also vectors containing them and experimental models. The nucleotides (also vectors containing the vectors), the encoded polypeptides and antibodies calls containing the vectors), the encoded polypeptides and antibodies or viral infections or diseases characterized by development of tumours or call degeneration (e.g. Alzheimer's disease or schizophrenia).

Or call degeneration (e.g. Alzheimer's disease or schizophrenia).

Analysis of these diseases. The nucleotides and polypeptides can also be used to screen for their specific interactive molecules, the nucleotides and polypeptides can be used to forteen for their specific interactive molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  reproductive maturation regulator; imago; diapause inducer; diapause inhibitor; larva; transformation regulator; pupa; juvenile hormone acid transmethylase; silkworm; Bombyy, mori) brosophila melanogaster; mosquito; Anopheles gambia; Spodoptera litura; Helicoverpa armigera; molting; transformation; diapause; blastogenesis; polymorphism; arthropod; cotton bollworm; PCR primer.
                                                                                                                                                                                                                                                                                                                                                           New nucleic acid encoding human prostate membrane-specific antigen, useful e.g. for treatment of tumors and viral infection, also related polypeptide and antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

```
The invention relates to a DNA (I) encoding a protein (II) having juvenile-hormone acid transmethylase activity selected from the DNA from silkworm (Bennbyx mori), Drosophila melanogaster, mosquito (Anophelas gambiae), Spodoptera litura and Helicoverpa armigera, their encoded proteins (S2), DNAs (D2) that hybridize under stringent conditions with the nucleic acids or an amino acid sequence (S3) comprising any one of (S2) in which one or more amino acids are substituted, deleted, inserted and/or added. (I) is useful for screening a compound that controls the expression level of (I), and as a controlling agent of molting and transformation, reproductive, diapause, blastogenesis, action, polymorphism or lifetime of arthropod. (II) is useful for screening a compound having binding affinity with respect to (II), which involves contacting test compound that controls the binding of (II) which involves useful for screening a compound that controls the activity of involves contacting test compound with (II), measuring the activity of (II), and selecting the compound that controls the activity of (II), and selecting test compound that controls the activity of (II), and selecting test compound that decreases the activity of (II), and selecting the compound that decreases the activity of (II), and selecting the compound that decreases or increases the activity of (II), and selecting the compound that decreases or increases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of (II), based on comparison of the activity of (II) in absence of test compound. (II) is useful for manufacturing activated juvenile hormone. This sequence corresponds to a PCR primer used to amplify and isolate the transmethylase cDNA from the silkworm Bombyx mori.
                                                                                                                                                                                                                                                                                                           New DNA encoding protein having juvenile-hormone acid transmethylase activity, useful for screening for a compound controlling the expression level of juvenile-hormone acid transmethylase DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 17 BP; 0 A; 1 C; 1 G; 15 T; 0 U; 0 Other;

The present invention describes composition (I) for treating osseous defects comprising a porcus matrix and a cell that is committed to an osteogenic lineage. The composition is useful for healing a bone defects, especially those caused by osteoporosis, cyst like cavities, surgical resection, traumatic avulsion and congenital insufficiency. The compositions assist in the repair and regeneration of bone. Osteoblast precursor cells (Opc's) boost bone making capability of an ill or aged individual where Opc's are numerically deficient or functionally impaired. Opc's can be administered to express BMP to repair bone defects. The implant is useful for promoting vascular ingrowth and bone commation, especially in treating bone defects e.g. osteopenic spine. The composition promotes vascular ingrowth and bone formation. Opc's can be composition promotes vascular ingrowth and bone formation. Opc's can be composition promotes vascular ingrowth and bone formation in the composition abarrier to the progression of bone formation in the general manual they also encourage additional bone formation in the cuspension and they also encourage additional bone formation in the cuspension and they also encourage additional bone formation in the cuspension and they also encourage additional bone formation in the cuspension and they also encourage additional bone formation in the cuspension and they also encourage additional bone formation in the cuspension and they also encourage formation in the cuspension and they also encourage for procollagen I expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; obesity associated-biallelic marker; chromosome 10; obesity; ss; drug response; hyperuricaemia; digestive pathology; hypertension; cancer; hepatic function disorder; cardiovascular disease; hyperlipidaemia; PCR; insulin disorder; atheromatous disease; cardiac insufficiency; primer.

gene encodes an antigenic polypeptide, which is used to derive formulae for KSHV epitopes that are recognised by CD8 T cells. Polypeptides comprising the epitope are useful for producing a vaccine against KSHV. They are also useful for stimulating dendritic cells or T lymphocytes ex
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cytostatic; anticonvulsant; nootropic; muscula; anti-HIV; RNA interference; iRNA; antisense technology; lipid metabolism; cholesterol imbalance; dyslipidaemia hypercholesterolaemia; coronary artery disease; CAD; coronary heart disease; CHD; atherosclerosis; hepatic glucose production; glucose-metabolism-related disorder; diabetes; cancer; breast cancer; spinoce-metabolism-related disorder; diabetes; cancer; breast cancer; spinocerebellar ataxia; viral disease; AIDS; apolipoprotein B; apoB; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                            The invention relates to a set of novel map-related biallelic markers, preferably located on obesity disorder-associated chromosomal regions on chromosomes 3, 10 and 19. The markers are useful for genotyping or estimating the frequency of an allele in a population, for detecting an association between a genotype or haplotype and a phenotype, e.g. a disease involving drug responses, obssity or disorders related to obseity, such as hyperuricaemia, digestive pathology, hepatic function disorders, cancer, cardiovascular disease, hypertenation, hyperlipidaemia, insulin disorders, atheromatous disease and cardiac insufficiency. The markers are useful for detecting a statistical correlation between a biallelic marker allele and a phenotype and/or between a biallelic marker haplotype and a phenotype and/or between a biallelic marker haplotype and a phenotype and marker
                                                             Set of novel map-related biallelic markers, preferably located on obesity disorder-associated chromosomal regions on chromosomes 3, 10 and 19, useful, for e.g. detecting statistical correlations between marker allele and a phenotype.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polypeptides and expression vectors with an epitope sequence recognized by a CD8 T cell, useful in the manufacture of a vaccine for the prophylactic and/or therapeutic treatment of Kaposi's sarcoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Epitope; KSHV; CD8 T cell; vaccine; dendritic cell; T lymphocyte; PCR;

comportance and an antisense sequence, where the sense sequences have one or more asymmetrical 2'-O alkyl modifications, the antisense cone or more asymmetrical phosphorothioate modifications and the antisense sequence targets a human gene sequence. Also described and the antisense sequence targets a human gene sequence. Also described are: a pharmaceutical preparation comprising (1); reducing (M1) apos-100 levels or glucose-6-phosphatase levels in a subject; producing (I); stabilising (I), involves selecting a sequence with activity and introducing one or more asymmetrical modification in the sequence, where the modification decreasing (I) in security; a kit comprising (I) and instruction for its use; and a device the modification decreases nuclease sensitivity while not decreasing its activity; a kit comprising (I) and instruction for its use; and a device that can be dispense or administer a composition comprising (I). (I) is useful for reducing apos-100 levels or glucose-6-phosphatase levels.

The subject is suffering from a disorder characterised by elevated or otherwise unwanted expression of apos-100, elevated or otherwise unwanted disorder is cholesterol, and/or disregulation of lipid metabolism. The disorder is chosen from the HDL/LDL cholesterol imbalance, dyslipidaemias, hypercholesterolaemia, coronary attery disease (CMD), coronary heart. Chesterolaemia, coronary attery disease (CMD), coronary heart confliction of figuences production or for treating the diseases as mentioned above, cancer (e.g. breast, colon or treating the diseases as mentioned above, cancer (e.g. breast, colon or columnation benefit attack) in uncological disease (e.g., Huntington disease or septemberlae attack) or viral disease (e.g., AlDS). This sequence represents a human apolipoprotein B (Apos) antisense oligonucleotide that control Apos gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
  describes a RNA interference (iRNA) agent (I) comprising a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antilipemic; cardiant; vasotropic; antiarteriosclerotic; antidiabetic; cytostatic; anticonvulsant; nootropic; muscula; anti-HIV; RNA interference; iRNA; antisense technology; lipid metabolism; cholesterol imbalance; dyslipidaemia hypercholesterolaemia; coronary artery disease; CAD; coronary heart disease; CHD; atherosclerosis; hepatic glucose production; glucose-metabolism-related disorder; disease; cancer; breast cancer; ollon cancer; lung cancer; neurological disease; Huntington disease; spinocerebellar ataxia; viral disease; AIDS; apolipoprotein B; apoB; ss.

The invention describes a kna interference (ikkna) agent (i) comprising a sequence and an antisense sequence, where the sense sequences have one or more asymmetrical phosphorothicate modifications and the antisense sequence targets a human gene sequence. Also described are: a pharmaceutical preparation comprising (I); reducing (MI) apo8-100 (I) sequence are a pharmaceutical preparation comprising (I); reducing (MI) apo8-100 (I) stabilising (I); involves selecting a sequence with activity and introducing one or more asymmetrical modification in the sequence, where the modification decreases nuclease sensitivity while not decreasing its activity; a kit comprising (I) and instruction for its use; and a device that can be dispense or administer a composition comprising (I). (I) is useful for reducing apo8-100 levels or glucose-6-phosphatase levels. (MI) useful for reducing apo8-100 levels or glucose-6-phosphatase levels. (The subject is suffering from a disorder characterised by elevated or otherwise unwanted expression of apo8-100, elevated or otherwise unwanted correlation of dispense or coronary artery disease (CHD) and atheresoral or for treating glucose-metabolism. The disease (CHD) and atheresoral or for treating glucose-metabolism. The calted disorder e.g. diabetes or type-2 diabetes. (I) is useful for related disorder e.g. diabetes or type-2 diabetes. (I) is useful for treating the diseases as mentioned above, cancer (e.g., breast, colon or correasing the diseases as mentioned above, cancer (e.g., breast, colon or corpused and disease (e.g., AlDS). This sequence or control dispense or viral disease (e.g., AlDS). This sequence or control denoted to control denoted or control deno
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                         Interference RNA agent useful for treating dyslipidemias, coronary artery disease, diabetes, cancer or neurological disease, comprises sense sequence and antisense sequence which has specific modifications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention describes a RNA interference (IRNA) agent (I) comprising

New antisense compounds targeting nucleic acids encoding human P13 kinase
p110 delta useful for treating a disease or condition associated with P13
                                                                                                   Forward primer 3F (AAT45687), which incorporates a 5' BamHI site, and reverse primer 3R (AAT45688), which carries HindIII and PstI sites, were used for the PCR amplification of a 685 bp fragment of the N-terminal portion of the urease subunit B (UreB) gene (excluding the ATG codon) of Helicobacter felis (see also AAT45680). This was used with a previously obtd. UreB fragment in pILL219 to obtain a clone capable of synthesising cloned into pMAL to allow prodon. of UreB as a maltose binding protein fusion in E. coil. UreB can be used in novel compens. for the treatment and prevention of Helicobacter infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note= "Optionally 2'-methoxyethyl (2'-MOE) nucleotides"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     nucleotides"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Phosphatidyl inositol 3 kinase; PI3K; antisense oligonucleotide; p110; catalytic subunit; treatment; rheumatoid arthritis; asthma; research; diagnostic; infection; inflammation; tumour formation; inhibitor; ss.
New immunogenic compsn. contg. UreB and HspA antigens of Helicobacter for treatment and prevention of esp. H pylori infection, also new antibodies specific for these antigens.
                                                                                                                                                                                                                                                                                                                                                                      Gaps

This sequence represents a phosphatidyl inositol 3 kinase (PI3K)
targeting antisense oligonucleotide. Phosphatidyl inositol 3 kinases act
as downstream effectors of hormone and growth factor receptors, and have
been implicated in growth factor mediated cell transformation, and
mitogenesis, protein trafficking, cell. survival and proliferation, and
mitogenesis, protein trafficking, cell. survival and proliferation, and
cellular activities. PI3K is a heterodimer, consisting of a
llokD catalytic subunit (pl10), and an 85kD regulatory subunit (p85). The
invention relates to antisense oligonucleotides which target the pl10
cellular mRNA of PI3K. The antisense oligonucleotides may be used to treat
with various regions of the PI3K mRNA sequence, and inhibit the
expression of PI3K. The antisense oligonucleotides may be used to treat
cexpression of PI3K. The antisense oligonucleotides may be used to treat
a animal, particularly human, suspected of having or being prone to a
disease or condition associated with the expression of P13K. The
modulation (preferably inhibition) of the expression of P13K. The
modulation (preferably inhibition) of the expression of P13K. The
antisense oligonucleotides may also be used for research and diagnostics,
in pharmaccutical compositions and formulations, in the preparation of
kits for detecting the level of P13K in a sample, and as prophylaxis,
cell to prevent or delay infection, inflammation or tumour formation.
Antisense oligonucleotides, which are able to inhibit gene expression
specifically, are used to elucidate the function of particular genes, and
construction of partic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

AAZ69579 to AAZ7740 represent amplification nucleotide sequences. AAZ69579 to AAZ7740 represent amplification primers for the ballelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from pharmaceutical agents acting on a disease as well as other treatment. The invention traders to a mover isologue of ANGE-CLIDB, ANGE-CLIDB, ANGE-CLIDB, CLIDB or CLIDD, mRNA, or ANGE-CLIDB or ANGE-CLIDB or ANGE-CLIDB or ANGE-CLIDB or ANGE-CLIDB or ANGE-CLIDB or CLIDT, CLIDD, CLIDD, CLIDD or CLIDD or COMPINED or ANGE-CLIDB or ANGE-CLIDB or CLIDD or Complement, homologue or fragment. The novel nucleic acid sequences have complement, homologue or fragment. The novel nucleic acid sequences antipyretic, and antihiflammatory. The nucleic acid sequences be used in gene therapy to treat disorders. The nucleic acid sequences care useful for screening agents that inhibit or enhance activity of an ANGE CLIDP gene. The agent or antibody is useful for treating complement or antibody is useful for thintis or non-atopic asthma. The antibody is cuseful in an assay detecting or measuring the polypeptide in the sample. The splice variant of ANGE, CLIDP is useful for polypeptide. The splice variant of ANGE, CLIDP is useful for con-atopic asthma, or predicting the severity, or predisposition to a non-atopic asthma, or predicting the severity, or predisposition to a complete or the invertion of apprease a phis polynucleotide sequence represents a primer used in the complete or the invertion or apprease the apprease or the complete or the invertion or apprease the apprease or the complete or the invertion or apprease the apprease or the complete or the invertion or apprease the apprease or the complete or the invertion or apprease the apprease the apprease or the complete or the comple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid sequence comprising an ANGE, CLLD8 or CLLD7 mRNA, or their hybrid, useful for screening agents for treating IgE-mediated diseases, e.g. asthma, atopy, hay fever, eczema, atopic dermatitis, or allergic rhinitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel isolated or recombinant nucleic acid
                                                    ANGE, CLLDB; CLLD7; ANGE-CLLD8; ANGE-CLLD7; CLLD7-CLLD8;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a new compound which is targeted to a nucleic acid molecule encoding RECQLS and hybridises with and inhibits the expression of RECQLS. The compound is useful for preventing or retating an animal having a disease or condition associated with RECQLS e.g. tumour or inflammation. The present nucleic acid sequence represents a human RECQLS mRNA inhibition oligonucleotide of the invention
                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A compound, which hybridizes with and inhibits the expression of RECQL5 gene, useful for preventing or treating an animal having a disease or condition associated with RECQL5 e.g. tumor or inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human RECQL5 inhibition chimeric phosphorothioate oligonucleotide #51.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, obesity, cardiovascular disorder, hyperlipidemia or Cushing's syndrome.
                                                                                                          antisense oligonucleotide; glucocorticoid receptor; infection; inflammation; tumour formation; diabetes; obesity; cardiovascular disorder; hyperlipidaemia; Cushing's syndrome; human; 88; phosphorothioate backbone; 2 -methoxyethyl; 2'-MOE.
                                                                    Human glucocorticoid receptor-specific antisense oligonucleotide #3190.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 4; SEQ ID NO 3190; 985pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ઠ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to antisense compounds targetted to a nucleic acid encoding thyroid hormone receptor interactor 6 (TRIP6) to inhibit its expression. TRIP6 is also known as OPA-interacting protein-1 (OIP-1) and zyxin-related protein-1 (ZRP-1). TRIP6 but a located on chromosome 7q22. Antisense compounds of the invention are useful for modulating the expression of TRIP6 and for treating diseases or conditions associated with the expression of TRIP6 such as hyperproliferative disorders (e.g. cancer). They are useful for diagnostics, therapeutics, prophylaxis e.g. to prevent or delay infection, inflammation or tumour formation, as tesearch reagents and kits and in distinguishing between functions of various members of a biological pathway. The are also useful in antisense therapy. The present sequence is an antisense oligo targetted to human TRIP6 DNA. This oligo is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New antisense oligonucleotides targeted to nucleic acids encoding thyroid hormone receptor interactor 6, useful for diagnosing or treating hyperproliferative disorders, such as cancer.
                                                                                                                                                                                                                                                       /note= "Phosphorothioate backbone; All cytidine residues are 5-methylcytidines"

The invention comprises an antisense oligonucleotides that are targeted to nucleic acids encoding a mammalian glucocorticoid receptor. The antisense oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidaemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets the human glucocorticoid receptor gene. NOTE: The present sequence contains 2'-methoxyethyl (2'-MOE) wings and a phosphorothioate backbone.
                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      antisense oligonucleotide, glucocorticoid receptor; infection; finfiammation; tumour formation; diabetes; obesity; cardiovascular disorder; hyperlipidaemia; Cushing's syndrome; human; ss; phosphorothioate backbone; 2-methoxyethy1; 2'-MOE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human glucocorticoid receptor-specific antisense oligonucleotide #3739.
                                                                                                                                                                                                                                                                                                                                                                                    Gaps

New antisense oligonucleotide for modulating endothelial lipase expression, for diagnosing, preventing or treating e.g. dyslipidemia, low high density lipoprotein or cardiovascular disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /note= "This oligonucleotide has a phosphorothioate backbone and 2-methyoxyethyl (2'-MOB) wings at the 5' and 3' ends, which are 4 nucleotides in length. Also all cytidine residues are 5-methylcytidines"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antilipaemic; Cardiovascular; Analgesic; Antianginal; Antisense therapy; Human; Endothelial Lipase; dyslipidaemia; high density lipoprotein; {\rm HDL}; cardiovascular disorder; metabolic syndrome X_i ss.
                                                                                                                                                                                                            The present invention relates to antisense oligonucleotides (ADJ21603-ADJ25510) targeted to human Endothelial Lipase (EL) coding sequence (ADJ25517), where the antisense oligonucleotide specifically Mybridises with and inhibits the expression of EL. The antisense oligonucleotides are useful for modulating the expression of En. The antisense oligonucleotides or tissues to treat diseases associated with EL expression, such as dyslipidaemia, low high density lipoprotein (HDL), cardiovascular discorder or metabolic syndrome X. In addition, the oligonucleotides are used for diagnostics, prophylaxis, or as research reagents or kits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New antisense oligonucleotide for modulating endothelial lipase

                                                                                                                                                                                                                                                                                                                                                             The invention comprises an antisense oligonucleotides that are targeted to nucleic acids encoding a mammalian glucocorticoid receptor. The antisense oligonucleotides of the invention are useful for preventing or delaying infection, inflammation or tumour formation. The antisense oligonucleotides are also useful for treating diabetes, obesity, cardiovascular disorders, hyperlipidemia or Cushing's syndrome. The present DNA sequence represents an antisense oligonucleotide that targets the human glucocorticoid receptor gene. NOTE: The present sequence contains 2'-methoxyethyl (2'-MOE) wings and a phosphorothioate backbone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /mcd_base= OTHER
/mcd_base= This oligonucleotide has a phosphorothicate
/note= "This oligonucleotide (2'-MCB) wings at the 5'
backbone and 2-'methyoxyethyl (2'-MCB) wings at the 5'
and 3' ends, which are 4 nucleotides in length. Also all
cytidine residues are 5-methylcytidines"
                                                                                                                                                                                                                                 New antisense compound targeted to a nucleic acid molecule encoding mammalian glucocorticoid receptor, useful for treating diabetes, obesity, cardiovascular disorder, hyperlipidemia or Cushing's syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antilipaemic; Cardiovascular; Analgesic; Antianginal; Antisense therapy; Human; Endothelial Lipase; dyslipidaemia; high density lipoprotein; HDL; cardiovascular disorder; metabolic syndrome X; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           nucleic acid molecule encoding Navi.3, where the antisense compound specifically hybridizes with and inhibits the expression of Navi.3. The compound and composition are useful for treating a disease or condition associated with Navi.3, e.g. pain including but not limited to neuropathic pain, post-herpetic neuralgia, chronic pain, lower back pain, diabetic neuropathy, trigeminal neuropathy, arthritic pain, acute pain, pain from burns, migraine headache, cluster headache, mild-to-moderate headache; seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present
expression, for diagnosing, preventing or treating e.g. dyslipidemia, low high density lipoprotein or cardiovascular disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New antisense compound targeted to a nucleic acid molecule encoding Navl.3, useful for useful for treating a disease or condition associated with Navl.3, e.g., pain, seizure disorder such as childhood seizure disorder, or ataxia.
                                                                                        The present invention relates to antisense oligonucleotides (AbJ21603-AbJ25510) targeted to human Endothelial Lipase (EL) coding sequence (AbJ25517), where the antisense oligonucleotide specifically hybridises with and inhibits the expression of EL. The antisense oligonucleotides are useful for modulating the expression of endothelial lipase in cells or tissues to treat diseases associated with EL expression, such as dyslipidaemia, low high density lipoprotein (HDL), cardiovascular disorder or metabolic syndrome X. In addition, the oligonucleotides are used for diagnostics, prophylaxis, or as research reagents or kits.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Navl.3; Analgesic; Nootropic; Neuroprotective; post-herpetic neuralgia; diabetic neuropathy; arthritic pain; migraine headache; infantile epilepsy; ataxia; ss.

The compound and composition are useful for treating a disease or condition neurogathy path herpetic neuralgia, chronic pain, lower back pain, diabetic neurogathy, trigeminal neuralgia, chronic pain, lower back pain, pain from burns, migraine headache, cluster headache, mild-to-moderate pain, seizure disorder such as childhood seizure disorder, including but not limited to neonatal or infantile epilepsy; or ataxia. The present sequence represents a chimeric phosphorothioate oligonuclectide with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antisense compound targeted to a nucleic acid molecule encoding about.3, useful for useful for treating a disease or condition associated with Navl.3, e.g. pain, seizure disorder such as childhood seizure disorder, or ataxia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Navl.3; Analgesic; Nootropic; Neuroprotective; post-herpetic neuralgia; diabetic neuropathy; arthritic pain; migraine headache; infantile epilepsy; ataxia; ss.
               2'MOB wings and a deoxy gap. Used during the antisense inhibition of human Navl.3 expression, the oligonucleotides are designed to target different regions of the human Navl.3 RNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to an isolated nucleic acid with cytostatic action named cancer related gene-Liver 2 CRG-L2. The polynucleotides and polypeptides are useful in diagnosing and treating cancer, e.g. breast, kidney, colon, preferably liver cancer. The present sequence represents a primer of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antidiabetic; immunosuppressive; cardiovascular; antilipemic; antiarteriosclerotic; hepatotropic; litholytic; anorectic; neuroprotective; vasotropic; antisense; gene therapy; Parnesoid X receptor; diabetes; immunological disorder; cardiovascular disorder; dyslipidemia; atherosclerosis; high density lipoprotein; low density lipoprotein; hypercholesterolemia;
                                                                                                                                                                                                                                                                                                                                     Cancer Related Gene-Liver 2 sequences, useful in diagnosing and treating cancer, e.g. breast, kidney, colon, preferably liver cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Farnesoid X receptor gene expression antisense inhibitory oligo #1468.

```
The invention relates to an antisense compound 8-30 nucleobases in length targeted to a nucleic acid molecule encoding Farnesoid X receptor (FXR), where the antisense compound specifically hybridizes with and inhibits the expression of FXR. The composition and methods are useful for tissues, or for treating diseases or conditions associated with FXR, such as diabetes, immunological disorders, cardiovascular disorders, e.g. displaidemia and its symptoms, atherosclerosis, low HDL (high density lipoprotein), elevated LDL (low density lipoprotein) or lipoprotein, elevated LDL (low density lipoprotein) or hypercholesterolemia, gallstones, hypertialgy/ceridemia, obesity, hypercholesterolemia, gallstones, hypertialgy/ceridemia, obesity, neurological disorders, or isohemia/reperfusion injury. In addition, the composition is used for diagnostics, prophylaxis, or as research reagents or this sequence corresponds to an antisense oligonucleotide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antidiabetic; immunosuppressive; cardiovascular; antilipemic; antiarteriosclerotic; hepatotropic; litholytic; anorectic; neuroprotective; vasotropic; antisense; gene therapy; Farnesoid X receptor; diabetes; immunological disorder; cardiovascular disorder; dyslipidemia; atherosclerosis; high density lipoprotein; low density lipoprotein; low density lipoprotein; low density lipoprotein; high density lipoprotein; low density; neurological disorder; ischemia; reperfusion; diagnostics; prophylaxis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New antisense oligonucleotides useful for modulating expression of Farnesoid X Receptor (FXR) or for treating diseases associated with FXR, e.g. diabetes, immunological disorders, cardiovascular disorders, gallstones or obesity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Farnesoid X receptor gene expression antisense inhibitory oligo #1053.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                      The invention relates to an antisense compound 8-30 nucleobases in length targeted to a nucleic acid molecule encoding Farnesoid X receptor (FXR), where the antisense compound specifically hybridizes with and inhibits the expression of FXR. The composition and methods are useful for inhibiting the expression of FXR (Farnesoid X receptor) in cells or tissues, or for treating diseases or conditions associated with FXR, such as diabetes, immunological disorders, cardiovascular disorders, e.g. dysliptidemia and its symptoms, atherosclerosis, low HDL (high density lipoprotein), elevated LDL (low density lipoprotein) or hyperbolesterolemia, gallstones, hypertriglyceridemia, obesity, neurological disorders, or ischemial/reperfusion injury. In addition, the composition is used for diagnostics, prophylaxis, or as research reagents or kies. This sequence corresponds to an antisense oligonucleotide of the

This invention relates to a novel activated mutant protein tyrosine kinases and associated methods for diagnosing cancer and screening for anti-cancer agents. Protein kinases are signalling molecules involved in tumourigenesis. Mutational analysis of the human tyrosine kinase gene family identified somatic alteration sin 1 in 5 colorectal cancers, with the majority of mutations occurring in the NTRK3, FES, GUCY2F and MCCK/MLK4 genes. Most were identified in the kinase domain. The invention may be useful for the production of compounds with a cytostatic activity acting as protein tyrosine kinase inhibitors or guanylate cyclase stimulators. The invention may be useful for developing methods for detecting mutations involved in cancer or screening for anti-cancer agence. The present sequence is that of a human-derived oligonucleotide which is related to the invention.
                                                                                                                                                  Activated mutant protein tyrosine kinases (e.g. NTRK3, FES and MCCK) and associated methods for diagnosing cancer and screening for anti-cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human PI3K regulatory subunit 4, p150 DNA antisense oligonucleotide #49
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, phosphoinositide-3-kinase regulatory subunit 4, p150, P13K, P13 kinase; ss, antisense oligonucleotide; phosphorothioate linkage; 2'-O-methoxyethyl sugar moiety; 5-methylcytosine; hyperproliferative disorder; cancer, Chedlak-Higashi syndrome; neurodegenerative disorder; metabolic disorders; inflammation; cytostatic; immunomodulator; neurodegenerative; antimicrobial;

                                                                                                                                                                                                                                                                                               ð
                                                            The invention relates to a compound targeted to a nucleic acid molecule encoding human phosphoinositide-3-kinase (P13K) regulatory subunit 4, p150 p150. The compound is an antisense oligonucleotide that specifically hybridises with a nucleic acid molecule encoding P13K regulatory subunit 4, p150 and inhibits expression of the polypeptide. The antisense oligonucleotide comprises at least one modified internucleoside linkage i.e. a phosphorothioate linkage, at least one modified sugar moiety, preferably a 2'-0-methoxyethyl sugar moiety, or at least one modified nucleobase comprising a 5-methylcytosine. The antisense compounds are useful for modulating the expression of P13K regulatory subunit 4, p150 and for preventing or treating hyperproliferative disorders and metabolic disorders. These may also be used in research and diagnostics and in preventing or delaying infection or inflammation. This sequence

The invention relates to a compound targeted to a nucleic acid molecule encoding human phosphoinositide-3-kinase (PI3K) regulatory subunit 4, p150. The compound is an antisense oligonucleotide that specifically the profinates with a nucleic acid molecule encoding PI3K regulatory subunit 4, p150 and inhibits expression of the polypeptide. The antisense oligonucleotide comprises at least one modified internucleoside linkage i.e. a phosphorothicate linkage, at least one modified sugar moiety, or at least one modified nucleobase comprising a 5-methylcytosine. The antisense compounds are useful for modulating the expression of P13K regulatory subunit 4, p150 und for preventing or treating hyperproliferative disorders and metabolic disorders. These may also be used in research and diagnostics metabolic disorders. These may also be used in research and diagnostics and in preventing or delaying infection or inflammation. This sequence represents a P13K regulatory subunit 4, p150 DNA antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                regulatory subunit 4; p150; internucleoside linkage; regulatory subunit 4; p150; internucleoside linkage; phosphorothicate linkage; 2'-O-methoxyethyl sugar; 5-methylcytosine; infection; inflammation; tumour formation; hyperproliferative disorder; cancer; Chediak-Higashi syndrome; metabolic disorder; immunomodulator;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

This invention describes a novel antisense oligonucleotides which appecifically hybridises to and inhibits the expression of human phosphoinositide-3-Kinase, regulatory subunit 4, piso. The oligonucleotides comprises at least one modified internucleoside linkage, preferably a phosphorothioate linkage. It also comprises at least one modified sugar molety, preferably a 2-O-methoxyethyl sugar molety. The antisense oligonucleotide further comprises at least one modified antisense oligonucleotide further comprises at least one modified antisense oligonucleotide further comprises at least one modified antisense oligonucleotide can be used in diagnostics and as research reagents and kits. It can also be used prophylactically, e.g. to prevent or delay infection, inflammation or tumour formation. It can also be used to treat a disease or condition associated with phosphoinositide-3-kinase, regulatory subunit 4, pls0, e.g. hyperproliferative disorder, preferably cancer, Chediak-Higashi syndrome or a metabolic disorder. The products of the invention are immunomodulators with cytostatic activity and can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 20 BP; 5 A; 3 C; 4 G; 8 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          for gene therapy

Homo sapiens.

Freier SM, Dobie KW; WPI; 2004-282523/26. New antisense compound targeted to a nucleic acid molecule encoding phosphoinositide-3-kinase, regulatory subunit 4, p150, useful for treating cancer, Chediak-Higashi syndrome or a metabolic disorder.

Example 15; SEQ ID NO 127; 60pp; English.

specifically hybridises to and inhibits the expression of human phosphoinositide-3-kinase, regulatory subunit 4, p150. The oligonucleotides comprises at least one modified internucleoside linkage, This invention describes a novel antisense oligonucleotides which

preferably a phosphorothioate linkage. It also comprises at least one modified sugar moiety, preferably a 2'-0-methoxyethyl sugar moiety. The antisense oligonucleotide further comprises at least one modified nucleobase, preferably a 5-methylcycosine. The antisense oligonucleotide can be used prophylately a 5-methylcycosine. The antisense oligonucleotide can be used in diagnostics and as research reagents and kits. It can also be used prophylatelyiny, e.g. to prevent or delay infection, inflammation or tumour formation. It can also be used to treat a disease or condition associated with phosphoinositide-3-kinase, regulatory cubunit 4, p150, e.g. hyperproliferative disorder, preferably cancer, Chediak-Higashi syndrome or a metabolic disorder. The products of the invention are immunomodulators with cytostatic activity and can be used for gene therapy.
